positive energy SOLUTIONS

Tesla Powerwall 3 Wi-Fi Reconnection Procedure

TESLA

POWERWALL

positiveenergy.com.au

STEP 1

On the energy home screen in the Tesla App, tap “Device Offline”

STEP 2

Select “Powerwall 3”

STEP 3

Open the toggle switch cover on your Powerwall 3

STEP 4

After two seconds, “Found Toggle Switch” should appear as a prompt on your screen. Select this prompt once you locate the switch

STEP 5

When requested, tap “Pair” to enable a Bluetooth connection between your phone and your Powerwall 3

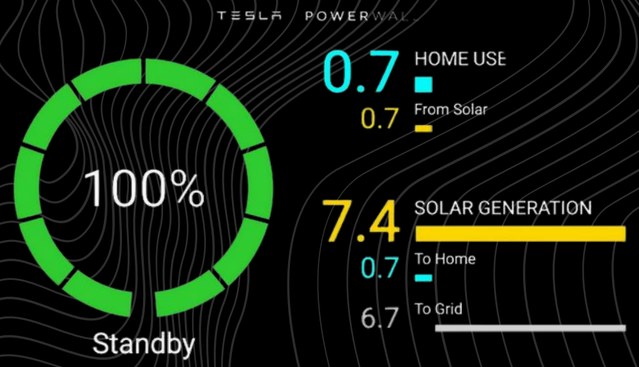
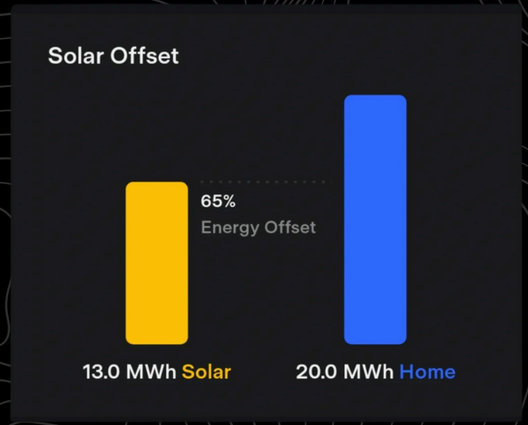
Tesla Powerwall 3 Wi-Fi Reconnection Procedure

TESLA

POWERWALL

positiveenergy.com.au





STEP 6

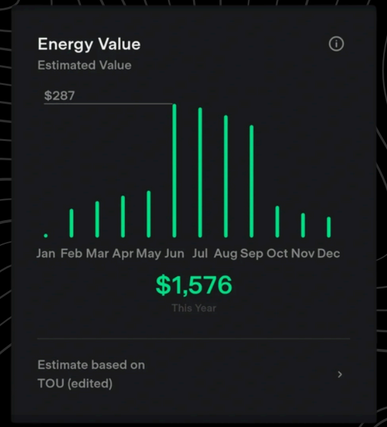
After you've paired your phone, toggle your Powerwall 3 switch off and then, back on

STEP 7

Tap "Toggled Switch"

STEP 8

Accept connection to network when requested in the Tesla app



NOTE

Once connected to your home Wi-Fi, your Powerwall's power flow and energy data will begin syncing with the Tesla network. If your device does not begin reporting data within 24 hours of connecting to Wi-Fi, contact contact the Customer Support team. If you are unable to connect your system to Wi-Fi, learn more about alternative internet connectivity options.

A Wi-Fi signal strength between two or three bars is required for a successful connection to your home network. If a signal strength of two or three bars is not achieved, relocate your access point or consider alternative connectivity options.
